NOTES FOR "ON OUTRIGGERS" TABLE

- Total rated loads shown in the table are based on condition that crane is set on firm level surface. Those above bold lines are based on crane strength and those below, on its stability.
- Total rated loads below bold lines do not exceed 75 % of tipping load.
- The weight of the hook (500 kg for 50 ton capacity, 150 kg for 5.6 ton capacity), slings and all similarly used load handling devices must be added to the weight of the load.

- For total rated load of single top, reduce the 500 kg from the relevant boom total rated load. Total rated load of single top should not exceed 5,600 kg.
- Free-fall operation should be performed without any load on the hook.
- Standard number of part lines for each boom length is as shown below. Load per line should not surpass 5,200 kg for main winch and 5,600 kg for auxiliary winch.

NOTES FOR "ON TIRES" TABLES

- Total rated loads shown in the table are based on condition that crane is set on firm level surface, with axle lockout applied. Those above bold lines are based on tire capacity and those below, on crane stability. They are based on actual working radii increased by tire deformation and boom deflection.
- "STATIONARY" load capacities do not exceed 75 % of tipping loads. "CREEP" load capacities do not exceed 66²/₃ % of tipping loads.
- The weight of the hook (500 kg for 50 ton capacity, 150 kg for 5.6 ton capacity), slings and all similarly used load handling devices must be added to the weight of the load.
- For total rated load of single top, reduce the 500 kg from the relevant boom total rated load. Total rated load of single top should not exceed 5,600 kg.
- Without outriggers lifting with "Jib" is not permitted. Maximum permissible boom length is 26.3m.
- Free-fall operation should not be performed without extending outriggers.
- CREEP is motion for crane not to travel more than 60 m in any 30 min. period and to travel at the speed of less than 1.6 km/h.
- During "CREEP" duties travel slowly and keep the lifting load as close to the ground as possible, and especially avoid any abrupt steering, accelerating or braking.
- Do not operate the crane while carrying the load.
- Tires should be inflated to their correct air pressure of 4.2 kg/cm².
- 2nd boom section stays fully retracted (3rd boom section and top boom section able to extend and retract simultaneously).
